

## BoDE Galaxy 'M-81'

Issue 4 | April 2021 | BoDE Foundation

### *Message from the Chairman – Neil Bhaskar*

“With every stride towards development, be it social or be it technological, we tend to move more and more away from the nature. It is upon us to decide, to move ahead or to change path”.

It has been observed since time immemorial, that humans have a tendency to trample whatever natural comes in its way, to build an artificial version of it. Maybe it is time, we change our mode of journey.

### *A changing world, seemingly for good*

Long lost have been the green meadows amidst which, standing under a clear blue sky, breathing in the air of life until our lungs could take no more. When, changes take place we cross our fingers and hope them to be for the best. Similarly, when men had to move indoors, the

world started to seem a lot greener, probably a reality, in the near most future. Although we are at the peak of developmental achievements, there is a faint hope that this ultimately could turn out in a better way, bringing back to the planet what has been destroyed.

### *Blog Post*

Every reality has a beginning, a time when the entire thought about its existence was new. Despite that we cannot ignore when it's glaring in front of us.

*“Let us look into ‘the world beyond office’, and how it has changed the entire conception of working for the world”.*

## ***Monthly Communiqué / Periodical***

### ***How economies vary, during the same crisis***

Just like Noah, had multiple variants of lives on his arc, the world is also a storehouse of differences. Even though we all are sailing in the same ship, life responds differently in each part of the planet.

For instance, living in the same time, amidst a pandemic, there are countries like India where the entire nation runs helter-skelter yearning for the littlest amount of life saving oxygen. Countries like Africa & Brazil, are still trying to figure out several ways to stop their pandemic death rates. While on the other hand, the United States announces a steady rise in employment, eventually leading to economic growth. While UK, moves towards a large-scale vaccine drive to immunise its residents, France opens its doors to the mass.

Developments, in Science like Artificial Intelligence goes hand in hand with the UN, promising new positives on the global climate change. Even though, the tides are extremely high, we as captains, know how to steer the ship.

### ***When the nature & we breathe together***

A study into the changes, our planet has been witness to since the restrictions brought about by the pandemic. How the planet has become greener, and how the pollution has reduced, making earth a more breathable planet, along with making our lives much better than before.

***“With more and more people, moving ahead with their lives from within their homes, the factors causing the destruction of the nature were reduced”.***

### ***Updates of the East***

***“Nocca Robotics in India, one of the first Start-ups, mentored by BoDE Foundation, becomes a key player in the War with Covid”.***
